Bryan Tabiadon – Executive Resume

(331) 575-3301

Btab1130@gmail.com

Executive Summary

Visionary Analytics & Data Executive with global experience leading enterprise-scale data transformations that unlock customer intelligence, drive strategic growth, and deliver measurable business impact. I specialize in building modern data ecosystems that integrate Customer 360, predictive modeling, and real-time analytics to fuel personalization, retention, and revenue acceleration.

With deep expertise in Data Strategy, Advanced Analytics, Data Engineering, Data Governance, and Customer Data Platforms (CDPs), I've led cross-functional initiatives across many industries. My leadership has enabled organizations to operationalize data through AI/ML frameworks, data monetization, and self-service BI platforms, empowering business leaders with actionable insights.

I've architected scalable solutions across multiple enterprise platform—building resilient, cloud-native data infrastructures that support data democratization, data observability, and data-driven decision-making. Whether launching an Analytics Center of Excellence or embedding customer analytics into product and marketing strategies, I bring a strategic vision grounded in execution, innovation, and impact.

Professional Experience Summary

Strategic and Versatile Data Executive with a proven track record of building and leading high-impact data programs that drive business transformation. Expert in Advanced Analytics, Big Data Platforms, Data Architecture, Business Intelligence, and Customer Data Platforms, with deep experience across diverse industries including Financial Services, Healthcare, Telecommunications, CPG, Retail, E-commerce, and Digital Media/Advertising.

Throughout my career, I've successfully developed and executed enterprise-level data and analytics strategies that deliver actionable customer and product insights, enhance operational efficiency, reduce costs, and unlock new revenue opportunities. I bring extensive international experience, having worked abroad and collaborated with global clients across multinational organizations.

As a hands-on executive, problem solver, and team builder, I specialize in creating high-performing analytics teams and scalable data ecosystems. I've architected and implemented data roadmaps encompassing Analytics Centers of Excellence, Data Science frameworks, and self-service BI platforms using tools such as Power BI, Tableau, Looker, MicroStrategy, and Business Objects.

Proficient in deploying robust data solutions across multiple platforms including Snowflake, Microsoft SQL Server, Oracle, IBM, Google Cloud (GCP), Azure, and AWS—delivering global-scale data programs that support strategic business goals.

Experience HISTORY

KnitWell Group-Sycamore Partners Private Equity (Acquired Chicos' FAS, Jan 2024)

Vice President-Head of Advance Analytics, AI & ML Models & Enterprise Data Architecture

August 2024 – Current

Leads the multi-brand Analytics and Data Science Teams for all Knitwell Brands(Chicos, WBM, SOMA, Talbots, Ann Taylor, Lane Bryant, Multiply Outlet Brands and Haven(online only). Delivers executive level actional insights and customer product investments measurements.

Additional, leads Data solution architecture to build comprehensive Enterprise Data Platforms across KnitWell Brands. The scope includes architecting cloud-based solutions leveraging AI and ML data accelerators and tools, with a focus on key data management and analytics capabilities. This includes Master Data Management (MDM), Customer Data Platforms (CDP), Enterprise Data Warehouses (EDW), Enterprise Data Lakes (EDL), Customer Relationship Management (CRM), as well as marketing and analytics capabilities

Current projects include the design, architecture, and implementation of the Knitwell Enterprise Customer Data Platform foundation using Snowflake, integrated with leading cloud technologies across AWS, Google-GCP, and Azure.

Google AI project- Actively engaged with Google-GCP and its suite of AI services to explore and test over 105 AI agents focused on processing customer data for advanced analytics and business reporting. This initiative involves evaluating agent performance across diverse data scenarios, optimizing workflows for real-time insights, and identifying scalable solutions that enhance decision-making capabilities. By leveraging Google's cutting-edge AI infrastructure, we aim to transform raw customer data into actionable intelligence that supports strategic business outcomes and personalized customer engagement experiences.

Chico's FAS, Inc.

August 2021 – August 2024

Vice President- Analytic, Data Science and Data Platforms

Parented with CEO to develop an execution of key analytics program & initiatives, including the Analytics Center of Excellence, Marketing Performance Management, Web Analytics, Data Platforms, Business Intelligence (BI) Reporting self Service Program, Advanced Analytics, Data Science Team, AI Proof-of-Concept projects, and Enterprise Data Architecture.

Key Achievements:

- Marketing/Sales/Customer/Web Analytics:
- Developed and executed on a 3-year Analytics Program Roadmap and Architecture Plan to align analytics strategy with business goals.
- Built high-performing teams across Reporting, Analytics, and Data Science.
- Centralized reporting platforms, significantly reducing redundancy.
- Improved data quality and reduced defects in reporting systems.
- Designed and deployed Enterprise Analytics Dashboards on Tableau, providing key business KPIs for the executive team.
- Built and managed a Data Lake on Google Cloud Platform (GCP) using Big Query.
- Developed forecasting and customer prediction models (e.g., PCVLT, MTA, MDM, CLT) to analyze customer lifetime spend and behavior characteristics.
- Launched a Customer Data Platform (CDP) to capture and analyze Return on Ad Spend (ROAS) across all 3rd-party marketing data.
- Established a CDP to track customer performance and optimize performance marketing strategies.
- Created customer segmentation models for Acquisition, Retention, and Reactivation, fueling targeted digital marketing campaigns (YouTube, Pinterest, Snapchat, Digital Display, Email).
- Developed a new Household Model to store universal customer identifiers and track over 400 customer attributes.
- Streamlined data services and platforms, resulting in $34M in annual savings over 3 years by sunsetting redundant data services and contracts.
- Managed multiple capital projects at $5M-$10M per year.

FTD, LLC(Nexus Capital Management LLP)

August 2018 – August 2021

Vice President- Analytic, Data Science and Data Platforms

Managed BI Reporting/Enterprise Analytics/Data Science/Data Management Platforms.

Executive driven directed Transformation of Enterprise Data, BI Platforms, Web Analytics (Abode/GA 360), Competitive Analysis, Tag management (DTM, Tealium, GTM), Customer LTV & MTA models from CDP(Customer Data Platform). Delivered architecture models and roadmaps to support the transformation of legacy platforms to Cloud Big Data Service in GCP-Big Query. Manage multiply teams responsible for Big Data engineering, Data warehouse, Data quality, BI developers, Data scientists, Digital platforms, and analytics support team.

Key Achievements:

- Marketing/Sales/Customer/Web Analytics:
- Build Enterprise Analytics Dashboard with key business KPIs for executive team.
- Launched Data Governance and Data Quality center of excellent with tech teams.
- Architected Data Lake to in GCP-Big Query, converted Netezza EDM/EDW.
- Launched Competitive Intelligence tool showing competitors information.
- Built and manage Google Cloud Big Data service in GCP-Big Query.
- Built Customer Data Platform to capture and measure (ROAS) all 3rd party Marketing data.
- Launched Google Analytics 360 build reporting dash boards in GCP-Looker
- Created monthly Customer acquisition analysis by channel, segmentation and margin
- Rebuild email platform (ESP) with CDP customer segments to target key occasions and holidays.
- Build customer reoccurring audience lists for Acquisition, Retention and Reactivation of customer campaign used in Digital marketing: YouTube, Pinterest, Snapchat, Digital Display and email campaigns.
- Build New customer Household model to store universal customer keys and store over 400 Customers attributes.
- Implemented unified data views to Integrated Customers data to 3rd marketing and analytic providers.
- Implemented UTM Tag management Strategy.
- Build LTV & COGS measurement models
- Executive Level Projects:
- Created strategy for Sales of key customer data assets during BRAND sale.
- Provided analysis of factual data in complicated and unique situations during company BRAND sales for company data assets.

- Develop comprehensive analytics strategies to measure and monitor business transformational goals.
- Responsibilities focused: strategic alignment and competitive analysis on M&A, partner acquisitions, business development opportunities, and technology evangelism.
- Reduced Analytics and BI platform cost by $5M annually by consolidating BI & Data platforms.

CATALINA MARKETING CORP

August 2017 – August 2018

Vice President-Analytics & Data Technologies

Directed the Enterprise Data Management Department in delivering architecture models and roadmaps to support the transformation of legacy platforms to Cloud technology. Managed teams(100+) responsible for Big Data engineering, Data warehouse, QA, Data quality, Data governance, Business intelligence reporting and Data Analytics. Architect Hadoop Enterprise Data Hub(EDH) and Marketing DMP/DSP on Azure Cloud. Manage Agile framework for Hadoop EDH development teams. Established and oversee the Executive Data Governance Council responsible for establishing business rules and policies. Partner with Google for data monetization of Retail POS Data Service using Google services. During IT outsourcing effort, became intern manager of several Infrastructure and Applications development teams in an effort to accomplish established cost savings goals. As well as conduct personnel duties for team (e.g. performance evaluations, reorganized people/process and executed on cost reduction of IT expense of over $20M).

Key Achievements:

- Worked with Prodcut and Customers to deployment data and analytics solutions.
- Built Enterprise Data Hub and Analytics Sandbox on Azure and Google for Clients
- Provided Analytic services to Retail-CPG customers
- Deployed BI Customer Reporting tools to over 100 Retail clients worldwide.
- Established a build/run team with operational support levels.
- Renegotiated vendor contracts and created offshore Operations model to deliver $9.46M in annual expense savings.
- Architected Big Data platform to support ML and SAS shopper model data for real time applications, decision models, and shopper segmentations.

- Commercialized digital data model and delivery strategy for US, Europe and Japan retail customers.
- Built data governance center of excellence to align with cross functional operational areas.
- Partnered with business leaders/units to develop business BI reporting within MicroStrategy and SAS to support customers.
- Created offshore strategy for Data, BI and analytic teams saving $3.5M.
- Build new platform to enrich Retail POS data for API paid service.

ANGIE'S LIST

March 2015 - August 2017

Senior Director of Analytics, Data Science & Data Management

Directed and architected new data management strategies and platforms to support BI reporting analytics. Managed 30+ onshore and offshore Analytics, Data Science, Data Platform and DBAs. Built Marketing DMP(Krux), Enterprise Data Hub using Hadoop(EMR) on AWS with deployment offshore model. Managed SQL Data Lake and SRSS services. Designed a customer 360 data model to support business units based on data enablement and data delivery needs. Established a Data Agile Sprint team to build out an AWS Hadoop(EMR) environment. Established the Executive Data Governance Council responsible for creating data standards and usage.

Key Achievements:

- Launched PowerBI Customer Analytics Dashboard to over 900 sales and customer service reps
- Built Enterprise Data Hub and DMP on AWS to support 3rd party and digital advertising.
- Drove the overall accountability for data integrity by establishing the necessary processes and controls around the flow of data from policy, claim and data acquisition systems through financial, statistical and management information reporting systems to ensure data quality for the enterprise.
- Built strong strategic partnerships with business segments and critical functional areas to develop the data structures for P&C products that will ensure data integrity and align with business objectives

- Spearheaded the data capture, editing, and transformation standards for reporting to support architecture standards and comply with corporate data policies. Established data quality and business rules for data mappings, conversions and ensured adequacy of test plans and test results associated with data transformation processes between applications.

UNITED STATES CELLULAR INC. November 2014 - March 2016

Director of Information Management & Data Platforms

Directed the data delivery services of Operational Data Store(ODS) and EDW Data Warehouses, with 20 BI associates, 60 Data developers and 30-40 offshore resources responsible for data modeling, design, delivery, and quality services. Managed BI platforms including Informatica, Cognos, Tableau, SAS and Unica. Spearheaded USCC CTO/CIO and enterprise architecture on big data strategy, switch data enablement, and monetization of data services. Led the RFP for Hadoop distribution selection, purchase, and implementations of 3rd party data ingestion, data offloading and data hub. Led RFP for new Kimball data model and road map for existing EDW data warehouse. Advised 250 business partners on new BI tools and analytical software products to meet their data needs and delivery requests.

Key Achievements:

- Launched Enterprise KPI Dashboard monitor 800 stores, sales, activations and product inventory.
- Monetization of smart phone click and geo location data.
- Build Enterpriser Data Lake for integration with marketing and telco partners.
- Reduced the cost of team project build by 50%, expense on service contracts by 24%, and staff augmentation by 37% with a total T&E expense savings of $5.5M annually.
- Consolidated data warehouse tools to reduce expenses and consolidate SME knowledge.
- Transformed support and call service processes to deliver a 99.9% up time on business SLA's.
- Ingested over 25 new 3rd party data feeds into a data warehouse to improve business partner reporting.
- Implemented data delivery key BI platforms to provide BI reporting dashboards to tablets which increased capacity and performance.
- Built Data Quality Center of Excellence and delivered over 100 data quality scripts based on business rules
-

THE NORTHERN TRUST COMPANY April 2007 - November 2014

Vice President & Divisional Manager of Data Management/BI/Reporting/Delivery Platforms

Directed the digital media data delivery services to clients. Managed a staff of 60+ employees and offshore resources responsible for managing over 400 million active data sets (350PBs) in global unstructured data platforms, SAS data transformations, reporting platforms, data delivery applications, data quality tools and services. Oversaw expense budgets, capital funding, scope management, vendor management, risk and issue mitigation strategies, version control, and change management process. Developed a Global BI data hub and standardization analytical tools (Tableau, Oracle, BO, SAS, IBI, SAS, IBM, and Microsoft). Spearheaded a 3-5-year IT operations data flow and data management strategy, and an EDW Hadoop strategy.

Key Achievements:

- Created IT Analytics & Data Governance Centers of Excellence (COE).
- Consolidated and integrate reporting platforms across business units to access Data Lake.
- Built Enterprise Data Lake to store archival (350 PB) data across 470 applications sources.
- Implemented the global IT initiative to transform paper into digital delivery which reduced print by 35% and printing expense by $1.4M annually.
- Spearheaded the development of 15 APIs and interfaces to integrate data across all application platforms.
- Developed Global and standardized encryption process for client media and implemented data governance models

Vice President & Divisional Manager Shared Services/Middleware/Data Storage

Managed the software engineering and middleware platforms. Partnered with IT executives and business leaders in establishing IT policies, processes, standards, roadmaps, data flow, and strategic planning. Implemented enterprise application architectures patterns, lifecycle plans, and load-term application roadmaps. Led the solution architect design and implementation of high-volume real-time reporting, trading, cash movement, and security transfer systems.

Key Achievements:

- Designed and implemented new customer web portals for over 20 counties.
- Implemented platform integration, workflow, and business process management solutions to streamline operations in account management, trade clearing, settlement and reconciliation.
- Migrated key legacy client-service applications into enterprise portal and adopted Adobe Flex technologies to improve client's portal functionality.

Education & Training

Master of Science, Information Management, McCormick School of Engineering, Northwestern University

Bachelor of Science, Finance, Northern Illinois University

IT Leadership Workshops, MIT Sloan School of Management

Continued education current enrollment:

Michigan Ross and Michigan Engineering Professional Education - **Chief Data and AI Officer Program-** (Currently attending April completion)

Certifications

ITIL Version 3

Six Sigma Certification (Motorola, ABN AMRO, LaSalle Bank, GE Project, Northern Trust, US Cellular)

Professional Affiliations

Association of Information Technology Professionals (AITP)

Data Management Association Chicago/San Francisco (DAMA)

Technology Executive Club (TEC)

Chicago CDO, Committee Member and Speaker
